EDUCATION

King's College London

London, UK

Computer Science BSc (Hons) | Predicted First-Class Honours

Sep 2023 – Jun 2027

▪ **Relevant Modules:** AI, Operating Systems, Software Engineering, Software Testing, Software Design, Distributed Systems

WORK EXPERIENCE

ICBC Standard Bank

London, UK

Technology Intern

Jun 2026 – Sep 2026

- Architected a TeamCity CI/CD pipeline utilizing a doc-to-code dependency mapper to selectively extract and AI-validate outdated technical Markdown documents, autonomously parsing and publishing updates to Confluence via MCP upon PR merges.
- Resolved critical npm blockers migrating a legacy AngularJS 1.8 frontend to Angular 22 architecture across a .NET/C# stack, utilizing standalone components to eliminate deprecated dependencies and reducing technical debt by 40%.
- Restructured and token-optimized thousands of lines of legacy documentation into a standardized, semantic Markdown schema, maximizing internal LLM context-window utility and reducing model hallucinations during RAG-driven code refactoring queries.

King's Labs

London, UK

Software Engineer

Dec 2025 – Apr 2026

- Engineered a TypeScript client platform in a 10-person team to serve as the core customer acquisition engine, deploying an ElevenLabs AI agent for automated voice-driven customer interviews. Architecting backend data extraction pipelines feeding a tailored WhatsApp chatbot to continuously address specific customer needs, boosting the interest-to-customer conversion ratio.

Student Administration Platform

London, UK

Project Leader

Sep 2025 – Dec 2025

- Directed a 7-person Agile team architecting a centralized Django/React platform, engineering scalable relational schemas and backend RESTful APIs, enforcing 94% backend and 97% frontend test coverage across 595 automated GitHub Actions suites.

Vibe Generator

London, UK

Founder

Jun 2025 – Sep 2026

- Architected a secure OAuth 2.0 gateway for a full-stack music intelligence web platform, implementing stateless session management using JSON Web Tokens, and securing persistent refresh tokens with AES-256 encryption at rest.
- Engineered a resilient Node.js data pipeline to synchronize and normalize streaming metadata across 6+ external APIs, utilizing concurrent asynchronous I/O to boost data retrieval performance by 23x.
- Designed a fault-tolerant multi-layer caching architecture with intelligent request batching, cutting average API latency by 60% and external calls by 80%, mitigating upstream rate-limiting penalties while minimizing cloud server execution costs.

TECHNICAL SKILLS

- Programming Languages:** JavaScript, TypeScript, Java, Python, C++, SQL, HTML, CSS
- Frameworks & Libraries:** Next.js, React, Node.js, Express.js, Django
- Other Tools:** DigitalOcean, AWS, Vercel, PostgreSQL, Neon, Git, GitHub, Cursor, Claude, Gemini
